

Ideation Phase

Empathize & Discover

Date	30 September 2026
Team ID	SWTID-2026-1542
Project Name	AnswerBot – AI-powered FAQ and customer support automation
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool that helps teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Empathy Map – AnswerBot

The map below is drawn from the point of view of Priya, the customer support operations manager from our case study, who handles a large backlog of repetitive user queries.

AnswerBot - Empathy Map (Persona: Priya, Customer Support Operations Manager)

Key Insights

- **Think & Feel:** Priya feels buried by repeated questions and wants answers that are trustworthy and always up to date.
- **Hear / See:** She hears pressure for faster resolution and sees a growing backlog of scattered, uncategorised entries.
- **Say & Do:** She copies old answers, sorts topics by hand and searches old documents for hours.
- **Pain → Gain:** Manual drafting, no search visibility and unprotected documents are solved by Gemini-generated FAQs, keyword search and JWT-secured, categorised FAQ management.
