

Project Design Phase

Problem – Solution FAQ Template

Date	29 September 2026
Team ID	SWTID-2026-1542
Project Name	AnswerBot – AI-powered FAQ and Customer Support Automation
Maximum Marks	2 Marks

Problem – Solution FAQ: This section maps the problems faced by users and support teams when finding and maintaining answers to the solution provided by the FAQ Assistant. It shows that the problem is real for the target users and that the solution addresses it.

Purpose: Identify the target users, their constraints, the problems they face, their current behaviour, and how the FAQ Assistant addresses those problems.

- ☐ Reduce time spent answering repetitive questions.
- ☐ Store and manage FAQs in one organised place.
- ☐ Help users find accurate answers quickly with smart search.
- ☐ Use AI to draft new questions and answers.
- ☐ Protect FAQ editing with secure login and access control.

Template:

1. CUSTOMER SEGMENTS - Customers looking for quick answers - Support team members answering repeat queries - Business owners and website admins - Students and new users needing guidance - Content managers who maintain help pages	6. CUSTOMER CONSTRAINTS - Limited staff time to answer every query - FAQ pages are hard to keep updated - Users leave if answers are not found fast - No easy way to organise questions by topic - Need to control who can edit content	5. AVAILABLE SOLUTIONS - Static FAQ pages on websites - Email and phone support - Live chat handled by agents - Basic search boxes matching exact words - Generic chatbots with fixed replies
2. JOBS-TO-BE-DONE / PROBLEMS - Find the right answer quickly - Reduce repeated support questions - Create and update FAQs easily - Organise FAQs into clear categories - Get accurate answers at any time of day	9. PROBLEM ROOT CAUSE FAQ content is written and maintained manually, is scattered or outdated, and is hard to search by meaning. Support teams repeat the same answers, so users wait longer and staff time is wasted.	7. BEHAVIOUR Users scroll through long FAQ pages, try several searches, then contact support directly. Support staff copy and paste old answers, and admins rarely have time to review or improve FAQ content.

3. TRIGGERS • A spike in repeated customer questions • Launch of a new product or policy • Complaints about slow replies • Need for 24/7 self-service help	10. YOUR SOLUTION An FAQ system that stores questions and answers in one place, organises them by category, and offers smart keyword and meaning-based search. Admins can create, edit and delete FAQs securely, and AI can suggest new questions and draft answers, so users get instant, accurate help.	8. CHANNELS OF BEHAVIOUR • ONLINE: website help centre, web/mobile app, chat widget, search engines, email • OFFLINE: help desks, phone support, printed guides, staff and word of mouth
4. EMOTIONS: BEFORE / AFTER BEFORE: frustrated, impatient, unsure where to look. AFTER: relieved, satisfied and confident that answers are quick and reliable.		SOLUTION / OUTCOME Faster answers, fewer repeat tickets, up-to-date organised FAQs, secure admin control and better customer satisfaction.
